UNIVERSALITY

Universality

Novy Zir medical centers provide the widest range of services.

- ▶ The Novy Zir centers accept patients without age restrictions. Our staff speaks English.
- ▶ The Novy Zir centers experts use all the directions of eye diseases treatment: surgical, cosmetic, therapeutic, optical.
- ▶ We offer more than 200 services on diagnostics, consultation and restoration of sight.
- ▶ There is a number of exclusive techniques that can be used only in the Novy Zir centers among its services. Each patient is offered an individual and effective way to solve vision problems.

Exclusive services

Laser correction of vision Super Lasik Thin Flap

Super Lasik Thin Flap is an innovative laser correction technology that differs not only in a high degree of safety but it also gives high quality after-correction vision (clarity, brightness, contrast). In addition, this technique allows you to perform eye correction even with a thin cornea. It is used only in the Novyi Zir medical centers in Ukraine.

Laser correction Femto LASIK WaveLight

Femto LASIK is the world's first and only knife-free laser vision correction technique! It is actually the SAFEST, most predictable and perfect technique. It is considered to be the gold standard of world ophthalmology and has received the widest distribution in Europe and the USA. Firstly, this method of correction was introduced into everyday medical practice in the Novyi Zir medical centers in Ukraine.

Exclusive services

Cataract Femto-Surgery

Today, Femto-Surgery is the best cataract treatment in the world of ophthalmology! The peculiarity of this operation is the complete automation of all the most important stages of the surgical process. The automation allows you to achieve incredible accuracy of all manipulations and get an excellent treatment result.

The OPTIMAL system (combined treatment)

A unique method of vision restoration allows to improve vision to the patients who could not previously be helped. The Optimal system is used to correct myopia and hyperopia of high degrees, as well as to correct age-related farsightedness. The basis of the Optimal system is a modern method of intraocular lenses implantation (phakic or multifocal) in combination with other refractive technologies (laser correction of vision).
